

**Project Title:****Analysis of Emerging Technology Trends Around the Globe (2014-18)****Project description:**

This undertaking analyses the evolution of generation traits around the globe from 2014 to 2018, using the predictions made in the Horizon Report, IEEE and MIT Technology Review. Horizon Report has been published yearly since 2004. Each edition tries to forecast the most promising technologies likely to impact. This research applies social evaluation, primarily based on Google Trends(GT), and bibliometric analysis, with information from IEEE, Hindawi, Wiley Online Library(WOL), JSTOR, Questia, Springer and Web of Science(WOS), with a purpose to discover which technology had been a hit and sincerely impacted mainstream training, and which one failed to have the anticipated impact. This mission gives guidelines that can be beneficial to those who are looking forward to investing in new research regions.

#### Project Description:

File Tracking System (FTS) is a web-based application that helps to track file and check the progress level. The application allows users to maintain constant vigilance on the movement of various important documents in the decision-making process. The main purpose of the project is to track file details such as, in which department the file is available, so employees can know the status of the file by simply accessing the website and saving time.

### Project Title

#### STORE IT

#### project description

The Problem for which we have created this app is that there are many shops and stores present outside the street or colonies, but people in those streets don't have a way to get their products and things or orders directly at home without going to the shop or store. Through this application, the user will get the desire utility directly to their home without going to a shop. The app will facilitate the customer as well as increase the productivity of the shop. The purpose or goal of the project is to provide the user their desire utility directly to their home. To obtain the main goal we will have some sub goals. In sub goals we have Google GPS for finding location, searching feature and chat or call system.

## Project Title: ChaiWala

Project Description	<p>Chai market is of greatest value nowadays but there are some tactical issues to deal with it. So, in this product, it's being planned to centralize all the chai points at a single platform so that the users can easily select the best/nearby cafe and place an order. Here the user will also have an edge to track the order; consequently, home delivery will become more formalized, and customer level satisfaction is many times enhanced. Same like this, conventionally when a user visits different cafe then he/she has to wait for the order to come, and usually it becomes more time consuming especially when café is much crowded so in that scenario it's also better to have a single application that will provide all services of café whenever user will visit that particular café and then ordering of chai will also be comparatively much easier.</p>	 <p>The screenshot displays the ChaiWala application interface. At the top, there's a header 'My Permanent Users' with a search bar labeled 'Search Here'. Below this, a section titled 'All Searched Account Records' lists two identical entries. Each entry features a circular profile picture of a cup of chai, followed by the text 'Pending Amount: 1000', 'Name:etc', 'Date: Feb 28,2019', and 'Address:etc'. A green 'VIEW PROFILE' button is positioned to the right of each entry. The app is running on a virtual device named 'Custom Phone_4 (768...' with a status bar at the top showing the time as 5:23. The bottom of the screen shows a navigation bar with icons for back, home, and recent apps, along with a 'free for personal use' watermark.</p>

**Project Title Horti Experts**

Project Description:	<p>Horticulture is a growing the field of agriculture that deals with the cultivation and processing of plants, fruits, vegetables, flowers, aromatic and medicinal plants Nowadays, people attraction towards horticulture sector increases because the government is focusing on the horticultural industry due to its significant contribution in the economy as employment generators and industrial raw material provider. Liberalization, privatization, and globalization of world trade also generated the opportunities of employment for youths across the country. Thus, a horticultural graduate can provide his services in various fields such as horticulturist, floriculturist, pomologist, technician, horticultural consultant, horticultural therapist, botanical garden worker, greenhouse manager, landscape architect, viticulturist, a nursery manager and horticultural marketers in governmental and private institutions.</p> <p>Horticulture is an extremely diversified field with unlimited career opportunities in a variety of area, and it also includes conservation of plants, restoration, landscape, design, and construction.</p>	
----------------------	--	--

	Using “HortiExperts” our target is to provide graduates and consultant a platform where they can showcase their skills and build an online portfolio where they can attract the business to hire them and provide a solution to the local market and global market as well. Business can hire horticulture consultants can make them work for them.

Project Title: Virtual Dressing Room

xii

Project Description:	<p>Virtual Dressing Room (VDR) is an app for the users of a clothing store and the owners of clothing stores/outlets. This app will facilitate those small shops who don't have enough space to exhibit their large variety of collections and allow them to show the maximum variety that will, in turn, reduce their cost of displaying the product. An online shopping facility will be provided with whole stock management. Owners will have the facility to provide for their customers a virtual dressing room in case of small shops with no changing room. Customers will have the facility to view the dresses on a 2D humanoid model and the facility of dressing combinations, a whole inventory will be provided to the customers where they can choose and design the outfit of their own choice. This will eventually save the time of both the customers and the owners.</p>

## Project Title: NurseryDecor

Project Description	<p>Pakistan, in the world, is known as an agricultural country having a rich environment for gardening, plantation, and Government of Pakistan pay much attention to its plant industry. The main target of the project is to make the business a centralized online platform where these small businesses of nurseries can grow and play their part to improve the ecosystem. The manual process with access to the local market can be upgraded to the automatic process with access to the global market. For nurseries, this a best way to get to upgrade their business and it also help them. Complete order management process available, and nurseries can manage the stock of products in the nursery shop. This brought a new way of how people look towards the plantation with easy access to the plant industry.</p>

**Project Title: Share Your Fare (Android Mobile Application)**

<b>Description</b>	<p>“Share your fare” is a travelling application which is used to provide a platform to a user to enjoy the facilities provided by the other user</p> <p>Two ideas have been implemented in this app. One is to plan a tour i.e. A person plans a tour with all the expenses, fares, departure location, departure date and time, and total days of tour are managed in that package and interested people can send request and if that tour planner accept his request they will contact with each other and start travelling.</p>
--------------------	---

	<p>Second is for sharing your fares i.e. A user has his own vehicle but it costs more if he travels alone. So, he can offer his service to other interested persons in his area who want to go to the same place. They will contact with each other for fare adjustment and start travelling, a user wants to travel but he has no vehicle, there are other travelers who are going to same place and have their own vehicles they will offer their services. He will send request to those travelers if they accept the request, they both can contact each other for fare adjustment and start travelling. They can also rate and see the profile of other companions.</p>

## INTERFACE

**Project Title:****CityCOPs**

<b>Project Description</b>	<p>CityCops is an android and website-based project, developed to create a network between public, dolphin police and police stations. Public Application provides features like “reporting an incident” through which people can send alerts to nearby dolphin police as the events unfold, “SOS” through a text message without internet can be delivered to trusted contacts. Other feature like ‘nearby places’ and ‘News’ and ‘your reports’ will keep uses informed. Dolphin application enables dolphin police to keep an eye on all the nearby incidents and helps them to take timely actions against them. Website for police stations shows all the incidents and updates on them. It helps police stations to alert public about active criminals. In short CityCops helps to create a safe and secure living environment.</p>

### **Project Title: Insight Dive**

#### **Description:**

The Internet is enormous, complex and regularly advancing. Almost 90% of the considerable number of information on the planet has been produced throughout the most recent two years. In this tremendous sea of information, how can one get to the pertinent snippet of data? This is the place web scrapping dominates.

With Internet and web innovation spreading, enormous measures of information will be open on the web. Especially with expanded selection of portable web. As indicated by one report, by 2020, the quantity of portable web clients will hit 3.8 billion, or around half of the total populace!

Since 'big data' can be both, organized and unstructured; web scrapping tools will just get more keen and sharp. There is savage challenge between the individuals who give web scrapping solutions. With the ascent of open source dialects like Python, R and Ruby, Customized scrapping tools will just prosper getting another flood of information accumulation and aggregation strategies. Web scrapping is extremely helpful to get updates of information consequently even when content is changed in site and to get unpredictable and confused information that is important for your business from these sites. The scraping phase includes all the steps we go through to gather, prepare, and store the information we want to analyze. Things like extracting information from the web, dealing with any of data's idiosyncrasies that could impact analysis in unwanted ways, and storing the information in a format that makes for easy analysis, are all part of the scraping phase.

So, by using this technique this app can show the admission, events, workshops, seminars, symposiums and conferences related news or information's to all our targeted users (students, teachers, researchers, technical people and sports persons). And notify the users according to their concern.

According to Pakistan Higher Education Commission Report for 2013-14, there are over 3 million students enrolled in grades 13 through 16 in Pakistan's 1086-degree colleges and 161 universities. The 3 million enrollment is 15% of the 20 million Pakistanis in the eligible age group of 18-24 years.

The purpose of this application is to resolve the problem which students face after intermediate, Bachelors and Masters for getting admission in an institute and other information of institutes that if no one is there to guide them properly about their interest or field relevant institutes and the scholarships available in these institutes. The main other problem that youngsters face is they mostly don't have information about the events going to held around them and due to this, they don't avail that opportunities. Also, Researchers face the difficulty to get information about the conferences that held around the globe.

Through this, app engrossed in obtaining the structured data from the HEC associated university's websites regarding all that admission related information of institutes. this application will be bestowing interactive interface where users can get the information about the technical and non-technical events that held in different institutes to give opportunities to students and players for participation and help the researchers for getting details and notifications about conferences, workshops and seminars. This application is concerned in proffer the customizable interface to notify the users according to their preferences.

**Title:** E-Farming

### **Description**

Pakistan, in the world, is known as an agricultural country and Government of Pakistan pay much attention to its agriculturist by providing multiple subsidies and many other benefits. Traditionally, a farmer adopts the regular process for cultivation. Sometime due to unwanted conditions a farmer does not know what he should do to save crops or for better yield. For this he communicates with others who had faced same problem or may have experience. The person suggests the solution to overcome the problem. The solution may contain multiple pesticide or fertilizers. After harvesting the crop, the main problem occurs for the farmer is to sell his crop with proper profit in the market. For a handsome profit he must find a good buyer. All this process of communication from asking someone for the crop that would be best according to his land of cultivation to earn money using it takes too much difficult jobs to find the best solutions.

One of the worst cases in agriculture is the disease detection. Manual disease detection process works on user experience or hit and trial method. No digital medium exists for such situations.

Using E-Farming app all the process of agriculture become an easy approach for any farmer. From crops information to Mandi/Market everything came under user hand while selecting simple options available in the app. Using app, he would be able to find compatible crop for his land, all the process of cultivation, best pesticides for insects, best fertilizers according to soil and crop to take the yield to maximum level, handsome amount regard to his harvested growth. For fertilizers and pesticides Agri shops are also available on the app waiting for your response according to their specific product that you are interested to buy. The main point that came through all process is the weather, E-Farming also allows you to check weather conditions, related to that weather he may be able to set his activities. For farmers communication, there is a platform for communication between all users to discuss their problems individually. If there is something that is creating too much problem user can post that in the forum for open discussion, where multiple user can share the experience on that post. User can search specific on specific topic. Topics mostly used would also available in term of word cloud or top trending.

Agriculture sector is changing day by day over the globe. Modern method for farming process has been invented. Farmers are educated using smart phones. Like all other countries Pakistan is also trying for advance agriculture techniques. These techniques include farmers education, modern instruments and modern process for cultivation. Online shops are available for every product over smart phones. Need of the hour was an online platform for agriculture products that has been deployed using E-Farming android app.
